

5.)

Project Name	SQL Injection Testing
Client Name	One of our most valuable client
Industry	Education & Institutional
Challenges (Work)	Client wanted to test a web app against a specific vulnerability assessment named "SQL Injection" Testing. The scope was a Website deployed in a Local server. And they required documentation of POC steps.
Type	Web App Pentesting [Specific Vulnerability]
Project Duration	3 working days
Outcome	We've checked Web apps against multiple types of SQL injections using Automatic & Manual Combined Approach and documented all the findings. After seeing our work, the client agreed to work on more projects.
